

MUHAMMAD WASEEM

CYBERSECURITY & AI · GKS UNDERGRADUATE APPLICANT 2027

muhammad.waseem.study1@gmail.com | github.com/Muhammadwaseem5131 | linkedin.com/in/muhammad-waseem-6361b4400 | Chishtian, Pakistan

PROFESSIONAL SUMMARY

Self-taught cybersecurity practitioner with a home security lab and four shipped security tools. Assistant IT Officer at an education NGO since 2024. Built tools for vulnerability scanning, log analysis and code security auditing, using an LLM (Gemini) where it helps. Every project has documented results and open-source code. Applying to the Department of Smart Security at Konyang University for the structured training that self-study cannot provide.

CORE STRENGTHS

Vulnerability Scanning

Log Analysis

Web App Testing

IT Support

Generative AI

Python

FastAPI

React

Network Security

MITRE ATT&CK

Linux

WORK EXPERIENCE

Assistant IT Officer — Ghazali Education Foundation 2024 – present
Education NGO, Pakistan

- Network and system troubleshooting, network maintenance, installing systems and software, and user support for staff.
- Assist with server administration and run regular backups.
- Helped respond when a break-in exposed student records.

PROJECT EXPERIENCE

OmniAudit — AI-Assisted Code Security Auditor

Creator & Developer

Local-first tool that scans code with Bandit and uses Gemini AI to classify vulnerabilities. Python 3.10, FastAPI, React 19.

- **Built** an end-to-end security auditor that separates real vulnerabilities from false alarms using AI scoring.
- **Designed** a local-first architecture — code never leaves the user's machine unless they opt in.
- **Integrated** Google ADK, MCP protocol, and the OSV database to check dependencies for known vulnerabilities.

IoT-Sentinel — Network Scanner for IoT Devices

Creator & Developer

Scans networks, identifies IoT devices, and checks device services against the NVD database. Python 3.12, FastAPI, React, SQLite.

- **Developed** automated IoT device discovery and vulnerability assessment across local networks.
- **Achieved** 67 passing tests with documented false-positive analysis for transparency.
- **Implemented** plain-language risk reporting so non-technical users can understand findings.

ScanMesh — Security Tool Orchestrator

Creator & Developer

Chains four tools (nmap, ZAP, sqlmap, tshark) into one deterministic pipeline. No AI — 100% rule-based.

- **Automated** four-tool security pipeline that merges correlated findings into high-confidence results.
- **Reduced** manual pentesting workflow from four separate tool runs to one unified command.
- **Unit tests** run in CI on every push. In a test run, ZAP flagged SQL injection, sqlmap confirmed it, and ScanMesh merged both into one critical finding.

LogMind — Security Log Anomaly Detector

Creator & Developer

Detects anomalies in security logs with MITRE ATT&CK mapping and live monitoring. Python stdlib only.

- **Achieved** 1.00 recall on 55 attack logs and macro F1 score of 0.89 across all detector categories.
- **Built** ten pure-function detectors with zero external dependencies — runs offline with no installs.
- **Documented** all 15 false positives with explanations, demonstrating honest evaluation over inflated claims.

GEF Head Office Network — Enterprise Network Design

Network Designer

Full enterprise network simulation for Ghazali Education Foundation in Cisco Packet Tracer 9.0.

- **Designed** 8-VLAN architecture with ASA 5505 firewall, inter-VLAN routing, and multi-ISP redundancy.

- Configured ACLs, port security, Rapid PVST+, DHCP/DNS servers in an isolated DMZ.
- Achieved full connectivity across all VLANs and through the firewall — all tests passing.

Security Labs — 18 Hands-on Labs

Nov 2025

Kali Linux on VirtualBox · 5 levels

- Completed labs in network reconnaissance, vulnerability assessment, web exploitation (SQL injection, XSS on DVWA) and IoT exposure.
- Practised digital forensics (file hashing, log inspection, incident notes) and static malware inspection.
- Documented every lab with a written report and screenshots, all on GitHub.

EDUCATION

Intermediate (FSc) — Govt. Graduate College, Chishtian

2019 – 2021

Grades 11 & 12 · Board of Intermediate & Secondary Education, Bahawalpur · A+ (888/1100)

Matriculation (Science) — Govt. High School No. 2, Chishtian

2017 – 2019

Grades 9 & 10 · Board of Intermediate & Secondary Education, Bahawalpur · A+ (1007/1100)

TECHNICAL SKILLS

Security	Applied AI	IT Operations	Development
• Vulnerability scanning • Web app testing (SQLi, XSS) • Log analysis & anomaly detection • Firewall & network segmentation • Digital forensics basics	• LLM integration (Gemini) • AI agents (Google ADK) • AI-assisted development (Antigravity)	• Network & system troubleshooting • Server administration (assist) • Backups & user support	• Python • FastAPI & React • Linux & networking • Data structures

COMMUNITY & VOLUNTEER EXPERIENCE

Flood Relief Operations — District Bahawalnagar Alkhidmat Foundation Pakistan. Distributed ration packages, registered displaced families, and maintained beneficiary records across relief camps for 6 weeks.	Aug – Oct 2025
IT & Computer Science Instructor Ghazali Education Foundation. Trained 50 students in computer fundamentals, Office suite, and internet literacy.	2025
Thalassemia Patient Support — Blood Donor Drives Patient Welfare Society Chishtian. Campus coordinator organizing high-school student donors.	Ongoing
World Orphan Day Event Ghazali Education Foundation. Volunteer organizer.	Feb 2026
Education in Emergencies — Global Course UNICEF Agora. Completed global course on education in crisis and emergency contexts.	Apr 2026
Pakistan National Youth Foundation PNYC — Project of LUMS. Youth empowerment, leadership, and UN SDG initiatives.	Active member
